Definitions

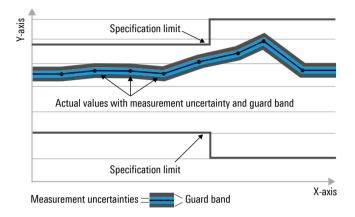

General

Product data applies under the following conditions:

- · Three hours of storage at ambient temperature followed by 60 minutes of warm-up operation
- Specified environmental conditions met
- · Recommended calibration interval adhered to
- · All internal automatic adjustments performed, if applicable

Specifications with limits

Represent warranted product performance by means of a range of values for the specified parameter. These specifications are marked with limiting symbols such as $\langle, \leq, \rangle, \geq$, \pm or descriptions such as maximum, limit of, minimum. Compliance is ensured by testing or is derived from the design. Test limits are narrowed by guard bands to take into account measurement uncertainties, drift and aging, if applicable.

Non-traceable specifications with limits (n. trc.)

Represent product performance that is specified and tested as described under "Specifications with limits" above. However, product performance in this case cannot be warranted due to the lack of measuring equipment traceable to national metrology standards. In this case, measurements are referenced to standards used in the Rohde & Schwarz laboratories.

Specifications without limits

Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value, e.g. dimensions or resolution of a setting parameter. Compliance is ensured by design.

Typical data (typ.)

Characterizes product performance by means of representative information for the given parameter. When marked with <, > or as a range, it represents the performance met by approximately 80 % of the instruments at production time. Otherwise, it represents the mean value.

Nominal values (nom.)

Characterize product performance by means of a representative value for the given parameter, e.g. nominal impedance. In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

Measured values (meas.)

Characterize expected product performance by means of measurement results gained from individual samples.

Uncertainties

Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Device settings and GUI parameters are designated with the format "parameter: value".

Non-traceable specifications with limits, typical data as well as nominal and measured values are not warranted by Rohde & Schwarz.

In line with the 3GPP standard, chip rates are specified in million chips per second (Mcps), whereas bit rates and symbol rates are specified in billion bit per second (Gbps), million bit per second (Mbps), thousand bit per second (kbps), million symbols per second (Msps) or thousand symbols per second (ksps), and sample rates are specified in million samples per second (Msample/s). Gbps, Mcps, Mbps, Msps, kbps, ksps and Msample/s are not SI units.

| | 3 ** * 3 *** | max. 500 Mpoints (single capture) | | |
| | | max. 250 Mpoints (run continuous) | | |

⁴ The maximum available memory depth depends on the bit resolution of the acquired data and, therefore, on the acquisition system settings such as decimation mode, use of waveform arithmetics or high definition (HD) mode. Interleave channels of the MXO 58 are on C1 and C5, C2 and C6, C3 and C7 as well as C4 and C8. For the MXO 54, all 4 channels run with 5 Gsample/s and maximum bandwidth.

| Acquisition modes | sample | middle sample in decimation interval |
|------------------------|--|---|
| | peak detect | largest and smallest sample in decimation |
| | | interval |
| | average | average value of samples in decimation interval |
| | number of averaged waveforms | 2 to 16 777 215 |
| | envelope | envelope of acquired waveforms |
| Sampling modes | real-time mode | max. sampling rate set by digitizer |
| | interpolated time | enhancement of sampling resolution by |
| | | interpolation; max. sampling rate is |
| | | 5 Tsample/s |
| Interpolation modes | | linear, sin(x)/x, sample & hold |
| Fast segmentation mode | continuous recording of waveforms in acq visualization | uisition memory without interruption due to |
| | max. real-time waveform acquisition | > 4 600 000 waveforms/s |
| | rate | |
| | min. blind time between consecutive acquisitions | < 21 ns |

High definition mode

| General description | digital filtering, leading to reduced n | The high definition mode increases the bit resolution of the waveform signal by using digital filtering, leading to reduced noise. Because of the digital trigger concept of the MXO 5, signals with increased numeric resolution are used as the input for triggering. | |
|-------------------------|---|---|--|
| Numeric resolution | bandwidth, at 5 Gsample/s | bit resolution | |
| | 1 kHz to 10 MHz | 18 bit | |
| | 100 MHz | 16 bit | |
| | 200 MHz | 15 bit | |
| | 500 MHz | 14 bit | |
| Real-time sampling rate | all models | max. 2.5 Gsample/s on 4 channels, | |
| | | max. 1.25 Gsample/s on 8 channels | |

Trigger system

| Trigger sources | | analog channels (C1 to C8), |
|---------------------|--|---|
| | | digital channels (D0 to D15), |
| | | trigger input, line trigger, serial bus |
| Trigger level range | | ±5 div from center of screen |
| Trigger modes | | auto, normal, single, n single |
| Trigger sensitivity | | 0.0001 div, from DC to instrument |
| | | bandwidth for all vertical scales, user |
| | | adjustable |
| Trigger jitter | full-scale sine wave of frequency set to | < 1 ps (RMS) (meas.) |
| | -3 dB bandwidth | |
| Coupling mode | standard | same as selected channel |
| | HF reject | cutoff frequency selectable from 1 kHz to |
| | | 500 MHz |
| | LF reject | attenuates frequencies < 50 kHz |
| Trigger hysteresis | modes | auto (default setting) or manual |
| | adjustment resolution | 0.0001 div, from DC to instrument |
| | | bandwidth for all vertical scales |
| Holdoff range | time | 100 ns to 10 s, fixed and random |

| Main trigger modes | | | |
|--------------------|--|--|--|
| Edge | triggers on specified edge (positi | triggers on specified edge (positive, negative or either) and level | |
| Glitch | triggers on glitches of positive, no specified width | egative or either polarity that are shorter or longer than | |
| | glitch width | 200 ps to 1000 s | |
| Width | 55 I 5 I | triggers on positive or negative pulse of specified width; width can be shorter, longer, inside or outside a specified range | |
| | pulse width | 200 ps to 1000 s | |
| Runt | fails to cross a second threshold | triggers on pulse of positive, negative or either polarity that crosses one threshold but fails to cross a second threshold before crossing the first one again; runt pulse width can be arbitrary, shorter, longer, inside or outside a specified range | |
| | runt pulse width | 200 ps to 1000 s | |

| Window | 55 5 | triggers when signal enters or exits a specified voltage range; triggers also when signal stays inside or outside the voltage range for a specified period of time | | |
|--------------|--|--|--|--|
| Timeout | triggers when signal stays high | h, low or unchanged for a specified period of time | | |
| | timeout | 0 ps to 1000 s | | |
| Interval | triggers when time between tw | o consecutive edges of same slope (positive or | | |
| | negative) is shorter, longer, ins | side or outside a specified range | | |
| | interval time | 200 ps to 1000 s | | |
| Slew rate | triggers when the time require | triggers when the time required by a signal edge to toggle between user-defined upper | | |
| | and lower voltage levels is shorter, longer, inside or outside a specified range; edge | | | |
| | slope may be positive, negative or either | | | |
| | toggle time | 0 ps to 1000 s | | |
| Setup & hold | triggers on setup time and hole | triggers on setup time and hold time violations between clock and data present on any | | |
| | | time interval may be specified by the user in the range | | |
| | from -100 s to 100 s around a | clock edge and must be at least 200 ps wide | | |
| Pattern | triggers when a logical combin | nation (and, nand, or, nor) of the input channels stays true | | |
| | for a period of time shorter, longer, inside or outside a specified range | | | |
| State | triggers when a logical combin | triggers when a logical combination (and, nand, or, nor) of the input channels stays true | | |
| | at a slope (positive, negative or either) in one selected channel | | | |

| Advanced trigger modes | | | |
|----------------------------------|---|---|--|
| Zone trigger | triggers on user-defined zones drawn on the display | | |
| | source | acquired waveforms (input channels), | |
| | | math waveforms (including power | |
| | | analysis waveforms), spectrum | |
| | | waveforms, XY plots | |
| | number of zones/areas | up to 4 zones with up to 8 areas each | |
| | area shapes | polygons with up to 16 points | |
| | area types | must intersect, must not intersect | |
| | combination of zones | logical combination of zones of multiple | |
| | | sources using Boolean expressions | |
| | trigger compatibility | requires sequence trigger A -> zone | |
| | 334 44 1 44 5 | trigger where primary A condition can be: | |
| | | edge, glitch, width, runt, window, timeout, | |
| | | interval, slew rate, setup & hold, state, | |
| | | pattern | |
| Sequence trigger (A/B/R trigger) | triggers on B event after occurrence | of A event; delay condition after A event specified | |
| eequeriee | as time interval; an optional R event | | |
| | trigger sources | analog channels (C1 to C8) | |
| | A event | edge, glitch, width, runt, window, timeout, | |
| | | interval, slew rate | |
| | B event | edge, glitch, width, runt, window, timeout, | |
| | | interval, slew rate | |
| | R event | edge, glitch, width, runt, window, timeout, | |
| | | interval, slew rate | |
| Serial bus trigger | optional | see dedicated triggering and decoding | |
| | | options | |
| Trigger input | input impedance | 50Ω (meas.) or | |
| | | 1 MΩ (meas.) 11 pF (meas.) | |
| | max. input voltage at 50 Ω | 30 V (V _p) | |
| | max. input voltage at 1 MΩ | 300 V (RMS), 400 V (V _p), | |
| | | derates at 20 dB/decade to 5 V (RMS) | |
| | | above 250 kHz | |
| | trigger level | ±5 V | |
| | sensitivity | | |
| | input frequency ≤ 500 MHz | 300 mV (V _{pp}) (meas.) | |
| | input coupling | AC, DC (50 Ω and 1 M Ω) | |
| | trigger filter | HF reject (attenuates > 50 kHz), | |
| | | LF reject (attenuates < 50 kHz), | |
| | | noise reject | |
| | triagor modoo | | |
| | trigger modes | edge (positive, negative or either) | |

| Trigger output | functionality | A pulse is generated for each event |
|----------------|----------------|--------------------------------------|
| | | triggering signal acquisition. |
| | output voltage | 0 V to 5 V (nom.) at high impedance; |
| | | 0 V to 2.5 V (nom.) at 50 Ω |
| | pulse width | selectable between 16 ns and 50 ms |
| | pulse polarity | low active or high active |
| | output delay | depends on trigger settings |

Spectrum analysis

| General description | Spectrum analysis allows up to four signal | Spectrum analysis allows up to four signal analysis in the frequency domain. | |
|---------------------|--|--|--|
| Spectrum | sources | channel 1 to channel 8 | |
| | setup parameters | center frequency, frequency span, | |
| | | resolution bandwidth (automatic or | |
| | | manual), gate position, gate width, vertical | |
| | | scaling, vertical position | |
| | scaling | dBm, dBV, dBµV, V (RMS) | |
| | span | 1 Hz to 1.8 GHz ⁵ | |
| | resolution bandwidth (RBW) | $(span/4) \ge RBW \ge (span/6000)$ | |
| | windows | flat top, Hanning, Hamming, Blackman, rectangular, Kaiser Bessel, Gaussian | |
| | trace types | normal, max. hold, min. hold, average | |
| | max. real-time waveform acquisition rate > 40 000 waveforms/s | | |
| Gate | delimits the display region used for spectrum analysis | | |
| Peak list | The values in the peak list are also shown in the diagram to allow easy correlation. | | |

RF characteristics

| Sensitivity/noise density | at 1 GHz (measurement of the power spectral density at 1 GHz at input sensitivity 2 mV/div, corresponding to –30 dBm input range of the oscilloscope, using spectrum analysis with center frequency 1 GHz, span 500 kHz, RBW 3 kHz) | –160 dBm (1 Hz) (meas.) |
|--|---|-------------------------|
| Noise figure | at 1 GHz (calculated based on the noise power density above) | 14 dB (meas.) |
| Dynamic range | measured for a 1 GHz input carrier with level –3 dBm at input of oscilloscope, using spectrum analysis with center frequency 1 GHz, span 2 MHz, RBW 400 Hz at +20 MHz from center frequency | 106 dB (meas.) |
| Absolute amplitude accuracy | 0 Hz to 1.2 GHz | ±1 dB (meas.) |
| Spurious-free dynamic range (excluding harmonics) | measured for a 250 MHz input carrier with level –3 dBm at input sensitivity 50 mV/div, using spectrum analysis with center frequency 900 MHz, span 1.8 GHz, RBW 300 kHz | 67 dBc (meas.) |
| Second harmonic distortion | measured for a 250 MHz input carrier with level –3 dBm at input sensitivity 50 mV/div, using spectrum analysis with center frequency 900 MHz, span 1.8 GHz, RBW 300 kHz | –65 dBc (meas.) |
| Third harmonic distortion | measured for a 250 MHz input carrier with level –3 dBm at input sensitivity 50 mV/div, using spectrum analysis with center frequency 900 MHz, span 1.8 GHz, RBW 300 kHz | –49 dBc (meas.) |

 $^{^{\}rm 5}$ $\,$ The stop frequency depends on the analog bandwidth of the instrument.

Waveform measurements

| Automatic measurements | measurements on acquired waveforms (input channels), math waveforms, reference waveforms | amplitude, high, low, maximum, minimum, peak-to-peak, mean, RMS, sigma, positive overshoot, negative overshoot, area, rise time, fall time, positive pulse width, negative pulse width, period, frequency, positive duty cycle, negative duty cycle, delay, phase, burst width, pulse count, edge count, pulse train, positive switching, negative switching, cycle area, cycle mean, cycle RMS, cycle sigma, setup, hold, setup/hold time, setup/hold ratio, slew rate rising, slew rate falling, delay to trigger |
|------------------------|--|---|
| | gate | delimits the display region evaluated for automatic measurements |
| | reference levels | user-configurable vertical levels define support structures for automatic measurements |
| | statistics | displays maximum, minimum, mean, standard deviation and measurement count for each automatic measurement |
| | number of active measurements | 24 |
| Cursor measurements | available cursors | up to four cursor sets on screen, each set with two horizontal and two vertical cursors |
| | target waveforms | acquired waveforms (input channels), math waveforms, reference waveforms, XY diagrams |
| | operating modes | vertical measurements, horizontal measurements, or both; vertical cursors either set manually or locked to waveform |

Waveform math

| General features | number of math equations | up to 8 |
|------------------|-------------------------------|---|
| | number of reference waveforms | up to 8 |
| | sources | channel 1 to 8, math waveforms 1 to 8, reference waveforms 1 to 8 |
| Functions | operators | add, subtract, multiply, divide, absolute value, square, square root, integrate, differentiate, log_{10} , log_e , log_2 , reciprocal, invert, lowpass, highpass, rescale ($a \cdot x + b$) |
| | filters | lowpass, highpass |
| | filter types | Gaussian, rectangular |
| | gate | delimits the display region used for waveform math |

Digital voltmeter

| Accuracy | | related to channel settings of voltmeter |
|------------------------|--------|--|
| | | source |
| Measurements | | DC, DC RMS, AC RMS |
| Sources | MXO 54 | C1, C2, C3, C4 |
| | MXO 58 | C1, C2, C3, C4, C5, C6, C7, C8 |
| Number of measurements | | up to 4 |
| Resolution | | up to 6 digits |
| Bandwidth | | up to 20 MHz |

Display characteristics

| Diagram types | Yt, XY, zoom, spectrum | |
|---|---|--|
| Display configuration (waveform layout) | The display area can be split into separate diagram areas by dragging and dropping | |
| | signal icons. Each diagram can hold any number of signals. Diagrams can be stacked | |
| | on top of each other and later accessed via dynamic tabs (Tab 1, etc.) | |
| Signal icons | Each active waveform is represented by a signal icon on the signal bar; the signal icon | |
| | displays the individual vertical and acquisition settings. | |
| Toolbar | Enables quick access to important tools; allows to set the most common parameters | |
| | directly in a simple menu and gives access to more detailed parameters in the main | |
| | menu. User-defined selection of tools in the toolbar. | |
| Upper menu bar | Displays trigger, horizontal and acquisition system settings; allows quick access to | |
| | these settings. | |
| Main menu | Provides access to all instrument settings in a compact menu structure. | |
| Axis label | The x-axis and y-axis are labeled with values and physical unit. | |
| Diagram label | Diagrams can be individually labeled with a descriptive, user-defined name. | |
| Diagram layout | The grid, crosshair, axis labeling and diagram labeling can be switched on and off | |
| | separately. | |
| Persistence | 50 ms to 50 s, or infinite | |
| Zoom vertical and horizontal; touch interface simplifies resize and drag op | | |
| | window | |
| Signal colors (waveform coding) | predefined or user-defined color tables for persistence display | |

History and segmented memory

| Acquisition memory | automatic | ŭ , | gment size and sample rate | |
|---------------------|--|---|-----------------------------------|--|
| | manual | | segment size and sample rate | |
| Memory segmentation | function | memory segments for the acquisition | | |
| | number of segments | record length | segments ⁶ | |
| | | | (up to) | |
| | | 1 kpoints | 1 048 575 | |
| | | 2 kpoints | 524 287 | |
| | | 5 kpoints | 262 143 | |
| | | 10 kpoints | 131 071 | |
| | | 20 kpoints | 65 535 | |
| | | 50 kpoints | 32 767 | |
| | | 100 kpoints | 16 383 | |
| | | 200 kpoints | 9 361 | |
| | | 500 kpoints | 4 095 | |
| | | 1 Mpoints | 2 113 | |
| | | 2 Mpoints | 1 056 | |
| | | 5 Mpoints | 427 | |
| | | 10 Mpoints | 213 | |
| | | 20 Mpoints | 106 | |
| | | 50 Mpoints | 41 | |
| | | 100 Mpoints | 20 | |
| | | 200 Mpoints | 9 | |
| | | 500 Mpoints | 3 | |
| | | 1 Gpoints | 1 | |
| | Segmentation is availab spectrum analysis. | le on all analog and logic cl | nannels, protocol decoding and | |
| Fast-segmented mode | continuous recording of | continuous recording of waveforms in acquisition memory without interruption due to | | |
| | visualization; blind time | visualization; blind time between consecutive acquisitions, see Acquisition system | | |
| History mode | function | | always-on function and provides | |
| | | access to past acquisit | ons in the segmented memory. | |
| | timestamp resolution | 1 ns | | |
| | history player | replays the recorded w | aveforms; repetition possible; | |
| | | | ual next/previous segment; | |
| | | numerical segment nur | nber input | |
| | analyze options | overlay all segments, a | verage all segments, envelope all | |
| | | segments | | |

⁶ With R&S®MXO5-B110 memory option. The maximum number of segments depends on the number of active channels and the bit resolution of the acquired data and, therefore, on the acquisition system settings such as decimation mode, use of waveform arithmetics or high definition (HD) mode. The maximum number of segments without the R&S®MXO5-B110 memory option is limited to 10 000.

Mask testing

| Test definition | number of masks | up to 8 simultaneously |
|-------------------------------|----------------------------------|---|
| | source | acquired waveforms (input channels), |
| | | math waveforms, reference waveforms, spectrum waveforms, XY plots |
| | fail condition | waveform hit |
| | test rate | up to 4 million waveforms/s |
| | action on error | acquisition stop, beep, save waveform, |
| | | pulse on trigger out |
| Mask definition with segments | number of segments per mask test | up to 8 |
| | segment definition | array of at least 3 points defines an inner |
| | | region |
| Result statistics | category | total completed acquisition, failed |
| | | acquisition, passed acquisition, fail rate, |
| | | overall test result (pass/fail) |
| Visualization options | waveform style | vectors, dots |
| | mask colors | predefined colors for mask without |
| | | violation (translucent gray), mask with |
| | | violation (translucent red) |

Miscellaneous

| Remote control | web interface | full operation of the instrument's touch interface, keys and multifunction wheel via web browser |
|----------------|--|---|
| | VNC | control of the instrument through virtual network computing |
| | SCPI | standard instrument programming interface through VISA |
| | WebDAV | support for the web distributed authoring and versioning (WebDAV) protocol, which provides secure access through an application proxy |
| Languages | available languages for the user interface | English, German, French, Simplified Chinese, Traditional Chinese, Japanese, Russian, Spanish, Italian, Portuguese, Korean, Czech, Polish |
| | online help on the instrument | English |

Input and output

Options

R&S®MXO5-B1 mixed signal option

Mixed signal capability is a standard functionality of the MXO 5 series oscilloscopes. The R&S[®]MXO5-B1 mixed signal option provides 16 digital channels with two R&S[®]RT-ZL04 probes.

R&S®MXO5-B6 arbitrary waveform generator

Arbitrary function/waveform generator, 2 analog channels

| General | |
|---------------------|--|
| Output channel | 2 channels |
| Vertical resolution | 16 bit |
| Operating modes | function generator, arbitrary waveform |
| | generator, modulation, frequency sweep |

| Function generator | output of predefined waveforms | |
|---------------------------|---|---|
| Sample rate | 625 Msample/s | |
| Waveforms | sine, square/pulse, ramp, DC, noise, sine cardinal (sinc), Gaussian pulse, Lorentz, exponential fall, exponential rise, cardiac | |
| Sine | frequency range | 1 mHz to 100 MHz |
| | amplitude flatness (relative to 1 kHz) | ≤ ±0.5 dB (meas.) |
| | total harmonic distortion (into 50 Ω) | |
| | f ≤ 10 MHz | ≤ –60 dBc (meas.) |
| | f > 10 MHz | ≤ –40 dBc (meas.) |
| | nonharmonic spurious | –75 dBc (meas.) |
| Square/pulse | frequency range | 1 mHz to 30 MHz |
| | duty cycle (if pulse width limit is not exceeded) | 0.01 % to 99.99 %, 0.01 % resolution |
| | pulse width | ≥ 16.5 ns, 0.1 ns resolution |
| | rise/fall time | 9 ns (meas.) |
| | overshoot | ≤ 2 % (meas.) |
| | jitter (cycle-to-cycle) (≥ 0.2 V (V _{pp})) | ≤ 40 ps (RMS) (meas.) |
| Ramp (triangle, sawtooth) | frequency range | 1 mHz to 1 MHz |
| | variable symmetry | 0 % to 100 %, 0.1 % resolution |
| DC | level range | |
| | into 50 Ω | ± 2.5 V |
| | into open circuit | ± 5 V |
| | resolution | 1 mV |
| Noise | amplitude | |
| | DC | 0 V to 5 V (V _{pp}) (into 50 Ω), |
| | | 0 V to 10 V (V_{pp}) (into open circuit), |
| | | 1 mV resolution |
| | all other waveforms | 0 % to 100 % of AC signal amplitude, |
| | | 1 % resolution |
| | bandwidth | ≥ 100 MHz |
| Sine cardinal (sinc) | frequency range | 1 mHz to 5 MHz |
| Gaussian pulse | frequency range | 1 mHz to 25 MHz |
| Lorentz | frequency range | 1 mHz to 10 MHz |
| Exponential rise/fall | frequency range | 1 mHz to 10 MHz |
| Cardiac | frequency range | 1 mHz to 1 MHz |

| Arbitrary waveform generator | output of user-defined waveforms | |
|------------------------------|------------------------------------|------|
| Waveform length | 1 sample to 40 Msample on each cha | nnel |
| Sample rate | 1 sample/s to 312.5 Msample/s | |
| Filter bandwidth | 100 MHz | |

| Modulation | | |
|------------------|-----------------------------------|---|
| Modulation types | | amplitude modulation (AM), frequency modulation (FM), frequency-shift key modulation (FSK), pulse width modulation (PWM) |
| Carrier waveform | AM, FM, FSK | sine |
| | PWM | square/pulse |
| AM | modulation signals | sine, square, ramp (triangle, sawtooth) |
| | modulation frequency | 1 mHz to 1 MHz |
| | depth | 0 % to 100 %, 0.1 % resolution |
| FM | modulation signals | sine, square, triangle, ramp, inverse ramp |
| | modulation frequency | 1 mHz to 1 MHz |
| | frequency deviation | 1 mHz to 10 MHz |
| FSK | modulation signal | 50 % duty cycle square wave |
| | range of frequency 1, frequency 2 | 1 mHz to 100 MHz |
| | hop rate | 1 mHz to 1 MHz |
| PWM | modulation signals | sine, square, ramp |
| | depth | 0 % to 99.99 % of the duty cycle, |
| | | 0.01 % resolution |

| Frequency sweep | | output of a sinusoidal waveform with the frequency changing linearly between the start frequency and the stop frequency within the sweep time | |
|-----------------|-----------------|---|--|
| | waveform | sine | |
| | frequency range | 1 mHz to 100 MHz | |
| | direction | up (start frequency < stop frequency) | |
| | | down (start frequency > stop frequency) | |
| | sweep time | 1 ms to 500 s | |

| Two-channel operation | operating modes | independent channels, coupled parameters, differential |
|------------------------------|--|--|
| | parameter coupling | none, frequency and/or amplitude |
| | relative phase | -180° to 180°, 0.1° resolution |
| | channel-to-channel skew (each channel with same output amplitude) | ≤ 200 ps (meas.) |
| | channel-to-channel isolation (each channel with same output amplitude) | ≥ 70 dB (meas.) |
| Outputs | | |
| Connectors | | BNC; on the front of the instrument |
| Function | | on/off, inverted |
| Output impedance | | 50 Ω (nom.) |
| Overload protection | V _{pp} > 200 mV into open circuit | a short-circuit to ground is tolerated indefinitely, automatic shutoff in case of voltages $\ge +12$ V or ≤ -12 V (meas.) |
| | $V_{pp} \le 200 \text{ mV}$ into open circuit | a short-circuit to ground is tolerated indefinitely, automatic shutoff in case of voltages ≥ +4 V or ≤ -4 V (meas.) |
| Amplitude range ⁸ | sine, square/pulse, ramp, exponential rise Gaussian, Lorentz, cardiac | /fall, arbitrary waveforms, sine cardinal (sinc), |
| | into 50 Ω | 5 mV to 5 V (V _{pp}) |
| | into open circuit | 10 mV to 10 V (V _{pp}) |
| | resolution | 1 mV |
| | accuracy | ±1 % at 1 kHz |

 $^{^{\,8}\,}$ Amplitude is the sum of the AC amplitude and the noise amplitude.

| DC offset range | sine, square/pulse, ramp, exponential rise/fall, arbitrary waveforms | |
|--------------------|--|--|
| | into 50 Ω | $\pm 2.5 \text{ V} (V_{pp} > 100 \text{ mV}),$ |
| | | ± 1.25 V (V _{pp} ≤ 100 mV) |
| | into open circuit | $\pm 5.0 \text{ V} (\text{V}_{\text{pp}} > 200 \text{ mV}),$ |
| | | ±2.5 V (V _{pp} ≤ 200 mV) |
| | sine cardinal (sinc): DC offset range is signal amplitude dependent | |
| | into 50 Ω | -2.823 V to +2.177 V (V _{pp} = 1 V) |
| | into open circuit | -5.323 V to +4.677 V (V _{pp} = 1 V) |
| | Gaussian, Lorentz: DC offset range is signal amplitude dependent | |
| | into 50 Ω | -3.000 V to +2.000 V (V _{pp} = 1 V) |
| | into open circuit | -5.500 V to +4.500 V (V _{pp} = 1 V) |
| | cardiac: DC offset range is signal amplitude dependent | |
| | into 50 Ω | -2.814 V to +2.186 V (V _{pp} = 1 V) |
| | into open circuit | -5.314 V to +4.686 V (V _{pp} = 1 V) |
| | resolution | 1 mV |
| | accuracy | \pm (1 % of control + (0.5 % of amplitude) + |
| | | 2 mV) |
| Frequency accuracy | | $ \Delta f \leq [$ (timebase accuracy) × (nominal |
| | | frequency) + 1.1 µHz] (calc.) |
| | | (timebase accuracy, see Horizontal |
| | | system) |

R&S[®]MXO5-K31 power analysis

| Power analysis (requires R&S | [®] MXO5-K31 option) | |
|------------------------------|--|---|
| General description | The R&S®MXO5-K31 power analysis option extends the MXO 5 firmware with measurement functionality focused on switched mode power supplies (SMPS) and DC/DC converters. Up to six sets of power analysis measurements are possible. | |
| Input | quality | evaluation of power quality at an AC input; measures real power, apparent power, reactive power, power factor and phase angle of power, frequency, crest factor, RMS of voltage and current |
| | harmonics | measures up to the 334th harmonic of the incoming line frequency; precompliance checking for IEC 61000-3-2 (A, B, C, D), RTCA DO-160, MIL-STD-1399, max. limit checks |
| Deskew | automated | automated compensation of the propagation delay |
| Zero offset | automated | automatic compensation of input offset |

R&S[®]MXO5-K36 frequency response analysis

| Frequency response analysis (rec | quires R&S [®] MXO5-B6 option) | |
|----------------------------------|--|---|
| Stimulus | frequency mode | single sweep or repeated sweep |
| | frequency range | 10 mHz to 100 MHz |
| | amplitude mode | fixed or amplitude profile |
| | amplitude level | 10 mV to 10 V into high Z |
| | | 5 mV to 5 V into 50 Ω |
| Input and output sources | | channel 1, channel 2, channel 3, |
| | | channel 4 |
| Number of test points | | 10 points to 500 points per decade |
| Measurement | | dual pair of tracking gain and phase |
| | | cursors |
| Diagram types | manually changeable vertical window size | parallel display of result window and input |
| | | and output signal view |
| Result table | | navigation and export functions |
| Scaling | during and after test | auto scale and manual scaling and |
| | | positioning |

R&S[®]MXO5-K510 low speed serial buses

| I ² C triggering and decoding Protocol configuration | bit rate | auto detected |
|--|--|---|
| | | auto detected |
| Trigger (hardware based) | source (clock and data) | any analog input channel or logical channel |
| | trigger event setup | start, stop, restart, missing ACK, address data, address + data |
| | address setup | 7 bit or 10 bit address (value in hex or binary); read, write or either; |
| | | condition =, \neq , \geq , \leq , in range, out of range |
| | data setup | data pattern up to 8 byte (hex or binary); condition =, \neq ; offset within frame in rang |
| | | from 0 byte to 4095 byte |
| Trigger (software based) | primary event trigger (hardware based) | edge, glitch, width, runt, windows, timeout, interval, slew rate |
| | frame type | write, read, 10 bit write, 10 bit read |
| | write | address; conditions =, ≠, <, ≤, >, ≥, in range, out of range; ACK-A; value 0, 1 |
| | | |
| | | data word; |
| | | conditions =, \neq , <, \leq , >, \geq , in range, out o |
| | | range for each of these options; |
| | | data index: selects the specific data word |
| | | conditions =, in range; |
| | | Ack-D word; |
| | | conditions =, \neq , <, ≤, >, ≥, in range, out o |
| | | range for each of these options; |
| | | Ack-D index: selects the specific data |
| | | word; conditions =, in range |
| | read | address; conditions =, \neq , <, ≤, >, ≥, in |
| | | range, out of range; |
| | | ACK-A; value 0, 1 |
| | | data word; |
| | | conditions =, \neq , <, ≤, >, ≥, in range, out o |
| | | range for each of these options; |
| | | data index: selects the specific data word |
| | | conditions =, in range; |
| | | Ack-D word; |
| | | conditions =, \neq , <, ≤, >, ≥, in range, out o range for each of these options; |
| | | Ack-D index: selects the specific data word; conditions =, in range |
| | 10 bit write | address; conditions =, \neq , <, <, >, >, >, in |
| | | range, out of range; ACK-A, ACK-A2; value 0, 1 for each of |
| | | these options; data word: |
| | | conditions =, \neq , <, \leq , >, \geq , in range, out o range for each of these options; |
| | | data index: selects the specific data word conditions =, in range; |
| | | Ack-D word; |
| | | conditions =, \neq , <, <, >, ≥, in range, out o range for each of these options; |
| | | Ack-D index: selects the specific data word; conditions =, in range |

| | 10 bit read | Address; conditions =, ≠, <, ≤, >, ≥, in range, out of range; ACK-A; value 0, 1 data word; conditions =, ≠, <, ≤, >, ≥, in range, out of range for each of these options; data index: selects the specific data word; conditions =, in range; Ack-D word; conditions =, ≠, <, ≤, >, ≥, in range, out of range for each of these options; |
|--------|-------------------------|---|
| | error condition | Ack-D index: selects the specific data word; conditions =, in range no stop bit, 10 bit read address different, unknown |
| Decode | source (clock and data) | any input channel, logical channel |
| 200000 | display type | decoded bus, tabulated list |
| | color coding | frame, start/restart, address (read/write), data, ACK/NACK, stop, error |
| | data format | hex, decimal, octal, binary, ASCII |
| | filter | filter result table on frame types, field values, status |
| | result export | export of all result data into CSV, XML, HTML and Py file formats |

| Protocol configuration | type | 2-wire, 3-wire and 4-wire SPI |
|--------------------------|--|---|
| | bit rate | auto detected |
| | bit order | LSB first, MSB first |
| | word size | 4/8/12/16/20/24/28/32 bit |
| | frame condition | CS, timeout |
| | polarity (MOSI, MISO, CS, CLK) | active high, active low |
| | phase (CLK) | first edge, second edge |
| Trigger (hardware based) | source (MOSI, MISO, CS, CLK) | any analog input channel or logical channel |
| | bit rate | up to 50 Mbps |
| | trigger event setup | start of frame, end of frame, MOSI, MISC |
| | data setup | data pattern up to 32 bit (hex or binary); condition =, ≠; offset within frame in range from 0 bit to 4095 bit |
| Trigger (software based) | primary event trigger (hardware based) | edge, glitch, width, runt, windows, timeout, interval, slew rate |
| | frame type | MISO, MOSI, MISOMOSI |
| | MISO | data word; conditions =, ≠, <, ≤, >, ≥, in range, out of range for each of these options; data index: selects the specific data word conditions =, in range |
| | MOSI | data word; conditions =, ≠, <, ≤, >, ≥, in range, out of range for each of these options; data index: selects the specific data word conditions =, in range |
| | MISOMOSI | data word; conditions =, ≠, <, ≤, >, ≥, in range, out of range for each of these options; data index: selects the specific data word conditions =, in range |
| | error condition | void, length |
| Decode | source (MOSI, MISO, CS, CLK) | any input channel, logical channel |
| | display type | decoded bus, tabulated list |
| | color coding | frame, word, error |
| | data format | hex, decimal, octal, binary, ASCII |
| | filter | filter result table on frame types, field values, status |
| | result export | export of all result data into CSV, XML, HTML and Py file formats |

| QUAD-SPI triggering and decodi | ing | |
|--------------------------------|--|---|
| Protocol configuration | source (CS, SCLK, IO0 to IO3) | analog, logical, math, reference channels |
| | bit rate | auto detected |
| | polarity (SCLK) | rising, falling |
| | polarity (CS, IO0 to IO3) | active high, active low |
| | instruction mode | single, dual, quad |
| | opcode | configurable list for opcode translation opcode list can be saved and loaded |
| Trigger (software based) | primary event trigger (hardware based) | edge, glitch, width, runt, windows, timeout, interval, slew rate |
| | frame type | data |
| | data | opcode, addr, alt, dummy; conditions =, \neq <, \leq , >, \geq , in range, out of range for each of these options; data word; conditions =, \neq , <, \leq , >, \geq , in range, out of range for each of these options; data index: selects the specific data word conditions =, in range |
| | error condition | length, opcode |
| Decode | display type | decoded bus, tabulated list |
| | color coding | frame, word, error |
| | data format | hex, decimal, octal, binary, ASCII |
| | filter | filter result table on frame types, field values, status |
| | result export | export of all result data into CSV, XML, HTML and Py file formats |

| UART/RS-232/RS-422/RS-485 trig | | |
|--------------------------------|--|---|
| Protocol configuration | bit rate | 300 bps to 20 Mbps |
| | signal polarity | idle low, idle high |
| | number of bits | 5 bit to 9 bit |
| | bit order | LSB first, MSB first |
| | parity | odd, even, mark, space, none |
| | stop bit | 1, 1.5 or 2 |
| | end of packet | timeout, none |
| Trigger (hardware based) | source (TX and RX) | any analog input channel or logical channel |
| | trigger event setup | start bit, packet start, data, parity error, stop error, break condition |
| | data setup | data pattern (hex, decimal, octal, binary of ASCII); condition =, ≠; offset within packet in range 0 word to 4095 words |
| Trigger (software based) | primary event trigger (hardware based) | edge, glitch, width, runt, windows, timeout, interval, slew rate |
| | frame type | TX, RX |
| | TX | data; conditions =, \neq , <, ≤, >, ≥, in range, out of range |
| | RX | data; conditions =, \neq , <, ≤, >, ≥, in range, out of range |
| | error condition | start, stop, parity, break |
| Decode | source (TX and RX) | any input channel, logical channel |
| | display type | decoded bus, tabulated list |
| | color coding | packet, data payload, start error, parity error, stop error |
| | data format | hex, decimal, octal, binary, ASCII |
| | filter | filter result table on frame types, field values, status |
| | result export | export of all result data into CSV, XML, HTML and Py file formats |

R&S®MXO5-K520 automotive protocols

| CAN FD/XL triggering and decoding Protocol configuration | signal type | CAN_H, CAN_L |
|---|--|---|
| | signal type | |
| | bit rate nominal bit rate | 100 kbps to 1 Mbps |
| | FD data rate | 100 kbps to 1 Mbps 100 kbps to 15 Mbps |
| | XL data rate | 100 kbps to 15 Mbps |
| | | 30 % to 90 % within bit period; |
| | sampling point | independent settings for nominal bit rate, |
| | | FD data rate and XL data rate |
| | device list | associate frame identifier with symbolic |
| | device list | ID, load DBC file content |
| Trigger (hardware based) | source | any analog input channel or logical |
| nggor (naranaro baoba) | | channel |
| | trigger event setup | start of frame, frame type, identifier, |
| | | identifier + data, error condition (any |
| | | combination of CRC error, bit stuffing |
| | | error, form error and ACK error) |
| | identifier setup | identifier type (standard or extended); |
| | | condition =, \neq , \geq , \leq , in range, out of range |
| | FD bits | FDF, BRS and ESI (0, 1, X) |
| | XL setup | SDT, VCID, AF; condition =, \neq , \geq , \leq , |
| | | in range, out of range |
| | data setup | data pattern up to 8 byte (hex, decimal, |
| | | octal, binary or ASCII); condition =, \neq |
| Trigger (software based) | primary event trigger (hardware based) | edge, glitch, width, runt, windows, |
| | | timeout, interval, slew rate |
| | frame type | CBFF, CBFF-R, CEFF, CEFF-R, FBFF, |
| | | FEFF, XLFF, overload, error |
| | CBFF | ID, DLC; conditions =, \neq , <, ≤, >, ≥, in |
| | | range, out of range for each of these |
| | | options; |
| | | data word; |
| | | conditions =, \neq , <, ≤, >, ≥, in range, out of |
| | | range for each of these options; |
| | | data index: selects the specific data word |
| | | conditions =, in range |
| | CBFF-R | ID, DLC; conditions =, \neq , <, ≤, >, ≥, in |
| | | range, out of range for each of these |
| | | options |
| | CEFF | EXT-ID, DLC; conditions =, \neq , <, ≤, >, ≥, |
| | | range, out of range for each of these |
| | | options; |
| | | data word; |
| | | conditions =, \neq , <, \leq , >, \geq , in range, out o |
| | | range for each of these options; |
| | | data index: selects the specific data word |
| | CEFF-R | conditions =, in range EXT-ID, DLC; conditions =, \neq , <, \leq , >, \geq , |
| | | range, out of range for each of these |
| | | options |
| | FBFF | ID, DLC; conditions =, \neq , <, <, >, >, >, in |
| | | range, out of range for each of these |
| | | options; |
| | | BRS, ESI; value 0, 1 for each of these |
| | | options; |
| | | data word; |
| | | conditions =, \neq , <, \leq , >, \geq , in range, out o |
| | | range for each of these options; |
| | | data index: selects the specific data word |
| | | conditions =, in range |

| | FEFF | ID, DLC; conditions =, \neq , <, \leq , >, \geq , in range, out of range for each of these options; BRS, ESI; value 0, 1 for each of these options; data word; conditions =, \neq , <, \leq , >, \geq , in range, out of range for each of these options; data index: selects the specific data word; conditions =, in range |
|--------|-----------------|---|
| | XLFF | Priority ID, SDT, DLC, VCID, AF; conditions =, \neq , <, \leq , >, \geq , in range, out of range for each of these options; SEC; value 0, 1; data word; conditions =, \neq , <, \leq , >, \geq , in range, out of range for each of these options; data index: selects the specific data word; conditions =, in range |
| | error condition | EOF, ack delimiter, no ack, CRC delimiter, CRC, stuff count, form, bit stuffing, unknown |
| Decode | source | any input channel, logical channel |
| | display type | decoded bus, tabulated list |
| | color coding | start of frame, identifier, DLC, ADS, SDT, VCID, AF, data payload, CRC, end of frame, error frame, overload frame, CRC error, bit stuffing error |
| | data format | hex, decimal, octal, binary, ASCII, symbolic |
| | filter | filter result table on frame types, field values, status |
| | result export | export of all result data into CSV, XML, HTML and Py file formats |

| LIN triggering and decoding | | |
|-----------------------------|--|--|
| Protocol configuration | version | 1.3, 2.x or SAE J602; mixed traffic is |
| | | supported |
| | bit rate | 1 kbps to 20 Mbps |
| Trigger (hardware based) | source | any analog input channel or logical channel |
| | trigger event setup | start of frame (sync break), identifier, identifier + data, wake-up frame, error condition (any combination of checksum error, parity error and sync field error) |
| | identifier setup | range from 0d to 63d; condition =, \neq , \geq , \leq , in range, out of range |
| | data setup | data pattern up to 8 byte (hex, decimal, octal, binary or ASCII); condition =, ≠ |
| Trigger (software based) | primary event trigger (hardware based) | edge, glitch, width, runt, windows, timeout, interval, slew rate |
| | frame type | data, wake up, unknown |
| | data | Id; conditions =, \neq , <, \leq , >, \geq , in range, ou |
| | | of range; |
| | | data word; |
| | | conditions =, \neq , <, ≤, >, ≥, in range, out of |
| | | range for each of these options; |
| | | data index: selects the specific data word conditions =, in range |
| | error condition | checksum, parity, start, sync, length |

| Decode | source | any input channel, logical channel |
|--------|---------------|--|
| | display type | decoded bus, tabulated list |
| | color coding | frame, frame identifier, data payload, |
| | | checksum, error condition |
| | data format | hex, decimal, octal, binary, ASCII |
| | filter | filter result table on frame types and field values |
| | result export | export of all result data into CSV, XML, HTML and Py file formats |

| SENT triggering and decoding | | |
|------------------------------|--|---|
| Protocol configuration | signal type | data signal |
| - | clock period (clock tick) | 1 µs to 100 µs |
| | clock tolerance | 0 % to 25 % |
| | data nibbles | 1 to 6 |
| | serial message type | none, short serial message and enhanced |
| | | serial message |
| | CRC version | Legacy (Feb 2008) and v2010 (Latest) |
| | CRC calculation | SAE J2716 standard and TLE 4998X |
| | pause pulse | no, yes, for constant frame length |
| | frame length in clock ticks (applicable only | 104 to 922 |
| | when pause pulse = constant frame length) | |
| Trigger (software based) | primary event trigger (hardware based) | edge, glitch, width, runt, windows, timeout interval, slew rate |
| | trigger event setup | calibration or sync, transmission |
| | | sequence, serial message and |
| | | error condition |
| | transmission sequence status nibble setup | from 0 to F, condition =, \neq , \geq , \leq , in range, |
| | | out of range |
| | transmission sequence data nibbles setup | each nibble value from 0 to F, condition = |
| | | ≠, ≥, ≤, in range, out of range |
| | serial message identifier setup | from 00 to FF, condition =, \neq , \geq , \leq , in |
| | | range, out of range |
| | serial message identifier type setup | 4 bit and 8 bit |
| | (applicable only when the serial protocol = | |
| | enhanced serial message in protocol | |
| | configuration) | |
| | serial message data setup | 00 to FF (short serial message) |
| | | 000 to FFF (enhanced serial message wit |
| | | 8 bit ID) |
| | | 0000 to FFFF (enhanced serial message |
| | | with 4 bit ID) |
| | error condition setup | form error, calibration pulse error, pulse |
| | | period error, CRC error and irregular |
| | | frame length error |
| Decode | source | any input channel, logical channel |
| | display type | decoded bus, tabulated list |
| | color coding | transmission sequence: |
| | | sync/calibration, status, data bits, CRC, |
| | | pause pulse (optional), calibration pulse |
| | | error, pulse period error, irregular frame |
| | | length error and CRC error; |
| | | serial message: |
| | | identifier, data, CRC, form error, |
| | | CRC error |
| | data format | hex, decimal, octal, binary, ASCII |
| | filter | filter result table on frame types and field |
| | | values |
| | result export | export of all result data into CSV, XML, |
| | | HTML and Py file formats |

R&S®MXO5-K530 aerospace protocols

| Protocol configuration | bit rate | high (100 kbps) |
|--------------------------|--|---|
| 5 | | low (12.0 kbps to 14.5 kbps) |
| | signal polarity | A leg, B leg |
| | min. gap | 0 to 100 bit, off |
| | max. gap | 0 to 1000 bit, off |
| Trigger (software based) | primary event trigger (hardware based) | edge, glitch, width, runt, windows, |
| | | timeout, interval, slew rate |
| | frame type | ARINC429-word |
| | ARINC429-word | label, SDI, data, SSM; conditions =, ≠, <, |
| | | \leq , >, \geq , in range, out of range for each of |
| | | these options |
| | error condition | coding, parity, unknown, gap |
| Decode | source | analog channel, math waveform, |
| | | reference waveform |
| | display type | decoded bus, tabulated list, decode layers |
| | color coding | for different cell types |
| | data format | hex, decimal, octal, binary, ASCII |
| | decode layer | off, ternary symbols, bits, words |
| | filter | filter result table on frame types, field |
| | | values, status |
| | result export | export of all result data into CSV, XML, |
| | | HTML and Py file formats |

| MIL-STD-1553 triggering and dec | oding | |
|---------------------------------|--|---|
| Protocol configuration | signal type | single-ended |
| | bit rate | standard bit rate (1 Mbit/s) |
| | polarity | normal, inverted |
| | device list | associate frame identifier with symbolic ID |
| | auto threshold setup | assisted threshold configuration |
| | timing | min. gap (2 µs to 262 µs) or off; |
| | | max. response (2 µs to 262 µs) or off |
| Trigger (software based) | primary event trigger (hardware based) | edge, glitch, width, runt, windows, |
| | | timeout, interval, slew rate |
| | frame Type | command, status, cmd/status, data |
| | command | RTA, Info; conditions =, \neq , <, ≤, >, ≥, in |
| | | range, out of range for each of these |
| | | options; P value 0, 1 |
| | status | RTA, Info; conditions =, \neq , <, ≤, >, ≥, in |

| r lotocol conliguiation | | |
| | supported version | 2.0 |
| | GSID | selectable in range 0 to 15 |
| Trigger (software based) | primary event trigger (hardware based) | edge, glitch, width, runt, windows, timeout, interval, slew rate |
| | frame type | register 0 write, register write, register read, extended register write, extended register read, extended register write lon extended register read long, main write, main read |
| | register 0 write setup | sub address, data word; conditions =, ≠, <, ≤, >, ≥, in range, out c range for each of these options; ack |
| | register write/read | sub address, register address, data work conditions =, ≠, <, ≤, >, ≥, in range, out c range for each of these options; ack (wri only) |
| | extended register write/read | sub address, byte count, register address data word; conditions =, ≠, <, ≤, >, ≥, in range, out of range for each of these options; data index: selects the specific data wor conditions =, in range; ack (write only) |
| | extended register write long/read long | sub address, byte count, register address register address 2, data word; conditions =, \neq , <, \leq , >, \geq , in range, out of range for each of these options; data index: selects the specific data wor conditions =, \neq , <, \leq , >, \geq , in range; ack (write only) |
| | main write/read | main address, register address, data word; conditions =, \neq , <, <, >, ≥, in range, out of range for each of these options; frame byte; conditions =, \neq , <, ≤, >, ≥, in range; ack (write only) |
| | error condition | no response, ack, bus park, parity, lenge arbitration, SSC, command, coding |
| Decode | source (SCLK and SDATA) | any input channel, logical channel, math waveform, reference waveform |
| | display type | decoded bus, tabulated list, details, decode layers |
| | color coding | arbitration sequence, command sequence, sequence start condition, device address, command, byte count, register address, data payload, parity bi bus park cycle, ack, error |
| | data format | hex, decimal, octal, binary, ASCII |
| | decode layer | off, edges, bit |
| | filter | filter result table on frame types, field values, status |
| | result export | export of all result data into CSV, XML, HTML and Py file formats |

| Protocol configuration | signal type | two channel, single-ended |
|--------------------------|---|--|
| | bit rate | auto-detected |
| | source (SCLK, SDATA) | any two input channels, math waveforms, |
| | our ported version | reference waveforms, or logical channels |
| | supported version | 1.X, 2.0,2.1 and 3.1 |
| | read mode | standard or read mode |
| | glitch filter | configurable glitch filter |
| Trigger (software based) | gap detection primary event trigger (hardware based) | detect gaps between sequences edge, glitch, width, runt, windows, timeou |
| | trigger event setup | interval, slew rate sequence start, sequence stop, register 0 write, register write, register read, extended register write, extended register read, extended register write long, extended register read long, error condition types |
| | sequence start setup | 4 bit sub device address; conditions =, ≠, <, ≤, >, ≥, in range, out of range |
| | sequence stop setup | 4 bit sub device address; conditions =, ≠, <, ≤, >, ≥, in range, out of range |
| | register 0 write setup | 4 bit sub device address, 7 bit data word; conditions =, ≠, <, ≤, >, ≥, in range, out of range for each of these options |
| | register write/read | 4 bit sub device address, 5 bit register address, 8 bit data word; conditions =, ≠, <, ≤, >, ≥, in range, out of range for each of these options |
| | extended register write/read | 4 bit sub device address; 8 bit address, byte count: 0 to 15 (inclusive), data pattern: 1 to 16 byte (hex or binary); conditions =, ≠, <, ≤, >, ≥, in range, out of range for each of these options; index: 1 to 16 selects the specific data frame byte; conditions =, ≠, <, ≤, >, ≥, in range |
| | extended register write long/read long | 4 bit sub device address, 8 bit address, byte count: 0 to 7 (inclusive), data pattern: 0 to 8 byte (hex or binary); conditions =, \neq , <, <, >, \geq , in range, out of range for each of these options; index: 1 to 8 selects the specific data frame byte; conditions =, \neq , <, \leq , >, \geq , in range |
| | interrupt summary and notification | 4 bit sub device address, bit count 0 to 32 notification and interrupt bits |
| | masked write | 4 bit sub device address; 8 bit address, 8 bit mask, 8 bit data pattern; conditions =, ≠, <, ≤, >, ≥, in range, out of range for each of these options; frame byte; conditions =, ≠, <, ≤, >, ≥, in range |
| | main device ownership handover | 2 bit MID; conditions =, \neq , <, \leq , >, \geq , in range, out of range for each of these options; frame byte; conditions =, \neq , <, \leq , >, \geq , |
| | main device write/read | in range 2 bit MID, 8 bit address, 16 bit data pattern; conditions =, ≠, <, ≤, >, ≥, in range, out of range for each of these options; frame byte; conditions =, ≠, <, ≤, >, ≥, in range |
| | main device context transfer write/read | 2 bit MID, 8 bit byte count, 8 bit address, |

| | | conditions =, \neq , <, \leq , >, \geq , in range, out of range for each of these options; index: 1 to 256 selects the specific data frame byte; conditions =, \neq , <, \leq , >, \geq , in range |
|--------|-----------------|--|
| | error condition | SSC error; length error, bus park error, parity error, no response, unknown sequence, version error, min. gap between frames: 1 ns to 10 us |
| Decode | display type | decoded bus, logical signal, bus + logical signal, tabulated list, decode layers |
| | color coding | sequence, frame, error |
| | data format | hex, octal, binary, ASCII, signed, unsigned |
| | decode layer | off, edges, bit |
| | filter | filter result table on frame types, field |
| | | values, status |
| | result export | export of all result data into CSV, XML, HTML and Py file formats |

R&S®MXO5-K560 automotive Ethernet protocols

| 10BASE-T1S triggering and dec | oding | |
|-------------------------------|--|--|

Rohde & Schwarz

The Rohde&Schwarz technology group is among the trailblazers when it comes to paving the way for a safer and connected world with its leading solutions in test&measurement, technology systems and networks&cybersecurity. Founded 90 years ago, the group is a reliable partner for industry and government customers around the globe. The independent company is headquartered in Munich, Germany and has an extensive sales and service network with locations in more than 70 countries.
