

FXA-103 MUX 16x2

Two times Sixteen channel multiplexer

Overview

The FXA-103 is a two times sixteen channel multiplexer which allows to route analog or digital input signals from multiple sources to one measurement device. To simplify control the corresponding relays of both multiplexers are switched together and each channel is equipped with a status led. In addition, it is delivered with an installed DIN rail carrier.

Features

- 2x multiplexers with 16 channels each
- 24V supply
- Active low switching
- Up to 100V / 0,5A
- Multiplexers are switched in parallel
- 100 million switching cycles (reed relays)
