

GSG-2000 Series

6GHz RF Signal Generator

FEATURES

- Frequency Range: 9kHz ~ 6GHz
- Frequency Resolution: 1mHz
- Standard 10ppm Frequency Stability, 2ppm/year Aging Rate.
 (Optional: 10ppb Frequency Stability with 0.1ppm/year Aging Rate)
- Amplitude Range: -140dBm ~ +20dBm
- 0.01dBm Amplitude Setting Resolution
- Amplitude Support dBm, dBµV, Vrms Unit
- Phase Noise: <-117dBc/Hz (Typical) @1GHz Output and 20kHz Offset
- Frequency/Amplitude Switching Speed: <5ms
- Built-in LF Output, Pulse Output
- . Built-in in AM, FM, PM Analog Modulation
- Support IQ Modulation Output (Only for GSG-2160)
 - * Maximum 60MHz Baseband I or Q Modulation Output
 - * Maximum 120MHz RF I+Q Modulation Output
 - * Built-in ASK,PSK,APSK,QAM,FSK,MSK,User-define IQ, User-define FSK Modulation Signal
- Provide USB, LAN and GPIB (Opt.), Commands Comply with SCPI Standards

Mess- und Prüftechnik. Die Experten.

The GSG-2000 series is a basic RF vector signal/signal generator. that covers a frequency range from 9kHz to 6GHz. It is suitable for applications in communications education, RF component testing (such as amplifiers, antennas, and filters), automotive electronic signal testing, and IoT applications. It meets the testing requirements of RF products during production and development stages. Compared to its main competitors, the GSG-2000 series offers superior specifications including a wide amplitude output range of +20dBm to -140dBm, lower phase noise of -117dBc/Hz, and high frequency accuracy with 10ppm frequency stability and 2ppm aging rate. Users have the option to enhance frequency stability and aging rate by selecting the OCXO (Oven Controlled Crystal Oscillator) option, which provides 10ppb stability and 0.1ppm aging rate.

For the signal modulation, the entire series has built-in AM, FM, and PM analog modulation, and GSG-2160 features a digital signal modulation function with a maximum bandwidth of 60MHz digital signal output, supporting ASK, PSK, APSK, QAM, FSK, MSK, User-defined IQ, User-defined FSK modulation signals.

Furthermore, the GSG-2000 series also provides LF signal and Pulse signal output. The LF signal allows users to output Sine, Square, Triangle/Ramp, Gaussian Noise signals, and the Pulse signal output can simulate pulse wave applications of various widths. In addition to the above signal outputs, GSG-2000 also provides AM/FM/digital IQ signal input, as well as independent output ports for digital I or Q signals.

GSG-2000 adopts a seven-inch TFT LCD display that can fully display the parameters and status set by the user, and the series also provides USB, LAN, GPIB (option) communications interfaces, and provides standard SCPI-compatible commands to support remote control . GSG-2000 is designed for 3U high standard rack size.

SELECTION GUIDE

Model	GSG-2160	GSG-2060
Frequency Range	9kHz~6GHz	9kHz~6GHz
Analog Modulation	AM, FM, PM	AM, FM, PM
Digital Modulation	ASK, PSK, APSK, QAM, FSK, MSK, user define IQ, user define FSK	I
LF Output V		٧
Pulse Output V		V

PROVIDES MULTIFUNCTIONAL OUTPUT SIGNALS

Pulse Signal Output Port

6.000

Digital Signal Output (GSG-2160 only)

Frequency Response Plot Generated by Internal Input IQ Signal.

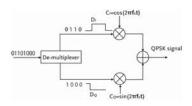

Both GSG-2160 and GSG-2060 provide RF signal output from 9kHz to 6GHz. GSG-2060 supports analog RF signal output (such as AM, FM, PM), and GSG-2160 supports analog and digital RF signal output.

LF Output with Built-in Function Signal - Equipped with an LF function signal (Low Frequency function generator) that can be output independently, and the series provides waveforms such as Sine, Square, Triangle, Ramp, Gaussian noise, etc. Users can use it in conjunction with other input and output functions, or it can be used alone in applications such as circuit design and electronic component testing and other related applications.

Pulse Signal Output - GSG-2000 Series has a built-in Pulse signal output. Users can adjust the Pulse duty cycle, which is often used to test digital circuits such as TTL, CMOS, ECL, etc., or to simulate changes in switching signals.

Vector signal output (GSG-2160 only) - Frequency response plot generated by internal input IQ signal.

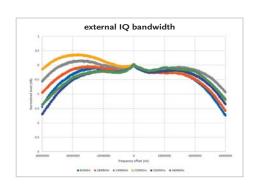

External IQ Signal & AM/FM Signal Input

I and Q input for QPSK Signal

Provides Input for External IQ Signal - Users can input I and Q data respectively, and then synthesize the required IQ vector signal through the internal RF signal output.

External AM/FM Signal Input - Users can input AM or FM signals externally for analog modulation related applications.

Frequency Response Diagram Generated by External Input IQ Signal

For example, in the QPSK signal in the diagram, after inputting the corresponding data from I and Q respectively, and selecting the QPSK function, QPSK output can be edited.

Frequency response diagram generated by external input IQ signal.

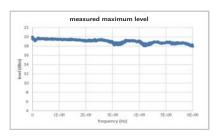

ACCURATELY SET RESOLUTION

EDEOUENCY	AMBUTUDE
FREQUENCY	AMPLITUDE
1.0000000000 GHz	-140.00 dBm

0.01dBm Setting Resolution

GSG-2000 provides a setting resolution as low as 1mHz in frequency and a setting resolution in amplitude of 0.01dBm, allowing users to process more complex signals.

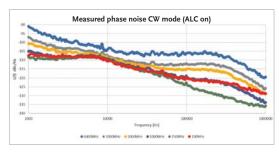

WIDE AMPLITUDE OUTPUT RANGE

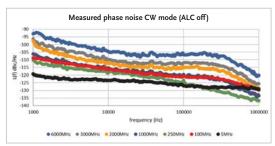

Guaranteed Specification Range

GSG-2000 provides a setting range from +20dBm ~ -140dBm, and a guaranteed specification range from $+14dBm \sim -110dBm$.

PURER SIGNAL OUTPUT

Measured Phase Noise CW mode (ALC on)

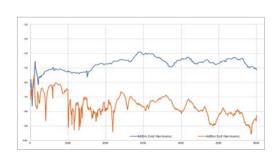

Measured Phase Noise CW mode (ALC off)

-117 dBc/Hz phase noise the output signal provided by GSG-2000 has an optimal phase noise of -117dBc/Hz, which can be applied to a wider variety of applications, such as automotive digital signals, IoT industrial applications and other fields that require pure signals.

The phase noise at each frequency under ALC On and ALC Off.

The signal purity of its Harmonic and Spur is also close to the entry-level indicators of major European and American manufacturers.

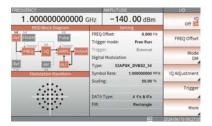

Harmonics<-35dBc

Phase Noise @ 20kHz offset (dBc/Hz)			
	MHz	ALC On	ALC Off
Frequency Range	5	-	-122
	100	-112	-115
	250	-112	-117
	1000	-112	-117
	2000	-108	-112
	3000	-107	-110
	6000	-102	-105

Harmonics		
Range	Level ≤ 4dBm	
9k ≤ Freq. < 6000M	<-35dBc	

Non-Harmonics		
Level > -10dBm, offset > 10kHz	<-65dBc	1M ≤Freq.< 5M
	<-70dBc	5M ≤Freq.< 187.5M
	<-75dBc	187.5M ≤Freq.< 750M
	<-72dBc	750M ≤Freq.< 1500M
	<-64dBc	1500M ≤Freq.< 3000M
	<-58dBc	3000M ≤Freq.< 6000M

. GRAPHIC DISPLAY DESIGN

GSG-2000 utilizes a 7-inch large-size LCD display. All setting parameters, measurement results and current function information can be directly displayed, allowing users to quickly understand the current setting information.

For the first innovation, icons and arrow connections are displayed directly on the screen, allowing users to understand the path of signal generation at a glance. For example, the PSK and QAM signal output in the picture above directly displays the block diagram, modulation signal pattern and corresponding parameters on the screen, allowing the user to set related parameters.

RICH COMMUNICATIONS INTERFACES

GSG-2000 provides standard interface LAN and USBTMC output, and optional GPIB interface to meet the user's connection needs under various interfaces. The command supports the standard SCPI IEEE488.2 standard command set.
